

ABSTRACT OF THE DISCLOSURE

In a communication system in which a plurality of client apparatuses individually having CAD software are connected via a network to a server managing information, information on a notation created on a CAD file screen of an arbitrary client apparatus is transmitted to the server. The notation information transmitted to the server is recorded on a recording medium. Further, the notation information is transmitted to one or more client apparatuses as destinations of the notation information. Thus, the transmitted notation information is displayed on a CAD file screen of each client apparatus as the destinations.
